

RENAL

RENAL **automatic** planting machines are manufactured in 3-, 4-, and 5-rows version. They can be used in small and medium size farms. The planting machines can be configured to adapt to the requirements of the farmers growing garlic, spring onions, tulips, saffron and beans.

For this purpose it is necessary to change the transport chain with welded drivers in selected size (from 22 mm to 33 mm), available in our offer. Standard equipment of the planting machine includes one set of chains with 28 mm drivers.

Smoothly adjustable row spacing:

3 – rows up to 38 cm

4 – rows up to 29 cm

5 – rows up to 22 cm

Planting density can be regulated with gear wheels in the range of 8 / 12 / 15.

Planting depth is regulated with front wheels.

Additional equipment that can be ordered with the planting machine:

- transport chains
- levelling shaft
- micro granulate feeder
